

# REEL

A tape-style multitrack field recorder for iPhone, by 24bit Studio.

## ABOUT

Reel is a tape-style multitrack field recorder for iPhone, built for musicians, songwriters, podcasters, and field recordists who want the tactile feel of hardware in their pocket.

Every control is designed for muscle memory. A large jog wheel lets you scrub through takes at variable speed. Dedicated record, play, stop, fast forward, and rewind controls. Tap to jump, hold to scrub, double-tap stop to return to zero.

Capture up to four tracks at 32-bit float / up to 96 kHz for archive-quality recordings with no clipping worries. Layer overdubs, punch in and out, loop any section. Connect any class-compliant USB-C audio interface with auto-routing on first connect.

Recordings save locally on your device for full privacy, with optional sync via your own iCloud Drive. Import audio from the Files app to use Reel as a music player. Export as WAV or AIFF.

One-time purchase. No subscription. No ads. No account required. The first 500 buyers receive lifetime Founder status, with free access to every future premium add-on and early beta access to new updates and features. Built by 24bit Studio.
